

# Loop 303 (Interstate 10 to US 60) Noise Barrier Study Areas

**Note:** Additional noise analyses will be conducted during the final design phase to determine the exact number, location, and height of noise barriers.

<sup>a</sup> The numbers pointing to the potential noise barrier locations indicate the number assigned to a particular barrier.

<sup>b</sup> Noise receivers are the sensitive locations (such as homes, schools, or churches) where potential noise impacts are analyzed.
